

Household Hazard Waste

Become **Better Informed** about Wellhead Protection

Do the products you use in your home pose a hazard to your drinking water? Many products may find their way into your drinking water supply. Improperly used, stored, or disposed of household products containing hazardous chemicals have the potential to enter the area's groundwater aquifer by infiltrating from the land surface through the soils.

We are working with solid waste offices and homeowners to implement preventive measures to help protect the drinking water and its residents.

Simple Steps YOU can take to protect your drinking water:

- *Keep track of the products used in your home and keep a minimum on hand.
- *Store these products in a safe place according to manufacturers directions.
- *If you have unwanted products containing hazardous chemicals:
DO NOT: throw them in the garbage or pour them down the drain!
DO NOT: pour them down the storm water drain or pour them on the ground!
- *Always follow manufacturers instructions when using these products.
- *Follow all Minnesota Pollution Control Agency requirements and recommendations practices concerning the disposal of these products.
